

## MM54HCT192/MM74HCT192 Synchronous Decade Up/Down Counters

### General Description

These high speed synchronous counters utilize advanced silicon-gate CMOS technology to achieve the high noise immunity and low power consumption of CMOS technology, along with the speeds of low power Schottky TTL. The MM54HCT192/MM74HCT192 is a decade counter having two separate clock inputs, an COUNT UP input and a COUNT DOWN input. All outputs of the flip-flops are simultaneously triggered on the low-to-high transition of either clock while the other input is held high. The direction of counting is determined by which input is clocked.

This device has TTL compatible inputs. It can drive 15 LS-TTL loads.

This counter may be preset by entering the desired data on the DATA A, DATA B, DATA C, and DATA D inputs. When the LOAD input is taken low, the data is loaded independently of either clock input. This feature allows the counter to be used as a divide-by-n counter by modifying the count length with the preset inputs.

In addition, the HCT192 can also be cleared. This is accomplished by inputting a high on the CLEAR input. All 4 internal stages are set to a low level independently of either COUNT input.

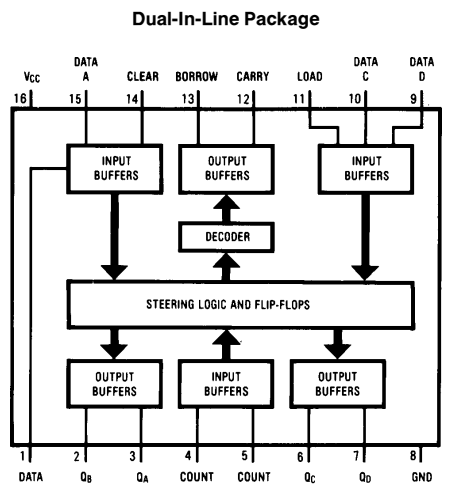

Both a BORROW and CARRY output are provided to enable cascading of both up and down counting functions. The BORROW output produces a negative-going pulse when the counter underflows and the CARRY outputs a pulse when the counter overflows. The counter can be cascaded by connecting the CARRY and BORROW outputs of one device to the COUNT UP and COUNT DOWN inputs, respectively, of the next device.

All inputs are protected from damage due to static discharge by diodes to  $V_{CC}$  and ground.

### Features

- Low quiescent supply current: 80  $\mu A$  maximum (74HCT Series)
- Low input current: 1  $\mu A$  maximum
- TTL compatible inputs

### Connection Diagram

### Truth Table

| Count |      | Clear | Load | Function   |
|-------|------|-------|------|------------|
| Up    | Down |       |      |            |
| ↑     | H    | L     | H    | Count Up   |
| H     | ↑    | L     | H    | Count Down |
| X     | X    | H     | X    | Clear      |
| X     | X    | L     | L    | Load       |

H = high level

L = low level

↑ = transition from low-to-high

X = don't care

## Absolute Maximum Ratings (Notes 1 and 2)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

|  |                          |
|--|--------------------------|
| Supply Voltage ( $V_{CC}$ )                      | −0.5V to +7.0V           |
| DC Input Voltage ( $V_{IN}$ )                    | −1.5V to $V_{CC}$ + 1.5V |
| DC Output Voltage ( $V_{OUT}$ )                  | −0.5V to $V_{CC}$ + 0.5V |
| Clamp Diode Current ( $I_{IK}$ , $I_{OK}$ )      | ±20 mA                   |
| DC Output Current, per Pin ( $I_{OUT}$ )         | ±25 mA                   |
| DC $V_{CC}$ or GND Current, per Pin ( $I_{CC}$ ) | ±50 mA                   |
| Storage Temperature Range ( $T_{STG}$ )          | −65°C to +150°C          |
| Power Dissipation ( $P_D$ )                      |                          |
| (Note 3)   | 600 mW                   |
| S.O. Package only                                | 500 mW                   |
| Lead Temperature ( $T_L$ )                       |                          |
| (Soldering, 10 seconds)                          | 260°C                    |

## Operating Conditions

|   | Min | Max      | Units |
|---|-----|----------|-------|

**Note 1:** Absolute Maximum Ratings are those values beyond which damage to the device may occur.

**Note 2:** Unless otherwise specified all voltages are referenced to ground.

**Note 3:** Power dissipation temperature derating—plastic “N” package: −12 mW/°C from 65°C to 85°C; ceramic “J” package: −12 mW/°C from 100°C to 125°C.

**Note 4:** Measured per pin, all other inputs held at  $V_{CC}$  or GND.

## AC Electrical Characteristics

(Note 6)  $V_{CC} = 5V$ ,  $T_A = 25^\circ C$ ,  $C_L = 15\text{ pF}$ ,  $t_r = t_f = 6\text{ ns}$  (unless otherwise specified)

## Logic Waveforms

**HCT192 Synchronous Decade Counters**  
Typical Clear, Load, and Count Sequences

TL/F/9400-3

### Sequences:

- (1) Clear outputs to zero.
- (2) Load (preset) to BCD seven.
- (3) Count up to eight, nine, carry, zero, one and two.
- (4) Count down to one, zero, borrow, nine, eight, and seven.

## Physical Dimensions inches (millimeters)

**Ceramic Dual-In-Line Package (J)**  
**Order Number MM54HCT192J or MM74HCT192J**  
**NS Package Number J16A**

**Physical Dimensions** inches (millimeters) (Continued)**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
